

Since 24.09.2019 you will be offered an update for the App Tasker in Google PlayStore.

Please do not install this if you have already done so. Can you delete them and then download the previous version with one click [here](#).

Since you probably have to set up Tasker after that I have uploaded my tasks and my profile [here](#).

So after you have re-set up Tasker you have to re-issue all permissions otherwise you have the problem that the values are out of date after a while.

But you just take the instructions you already know.

Then you import the tasks by just clicking on this link

<https://taskernet.com/shares/?user=AS35m8mlt5xx0ME%2BtNTXK6rFnQPs1RUb38m9tui3GLZpydqGl3C7iL1YYOsaI8lQbmAxMf%2B4&id=Task%3AVar+1.1>

It opens a page in the browser, here you press on Import and then you confirm everything with Yes / Yes to activate the tasks after the import.

Then you have to import the profile, click here:

<https://taskernet.com/shares/?user=AS35m8mlt5xx0ME%2BtNTXK6rFnQPs1RUb38m9tui3GLZpydqGl3C7iL1YYOsaI8lQbmAxMf%2B4&id=Profile%3AxDrip%2B+BG-VALUE%2FTIME%2FDELTA%2FGLUCOSEMETER>

It opens again a page on which you press again on import.

Then you confirm everything with Yes / Yes to activate the profile after the import and to link with the tasks.

Now everything is set so that it runs again.

Now you press in Tasker on top of the tab "TASKS" there on the entry Var 1, then the bottom of the "Play Button". Click on the "back arrow" at the top and repeat that with the second entry, Var 1.1

Then you give it a few minutes, then Tasker has done his job and the values are up to date again. To check if it worked, you can click on the tab "VARS". There, the values are displayed on the right side. If not, then something else is waiting. It may take up to 5 minutes for the values to appear there.
